

LogPro: Free & Enterprise Versions Breakdown

Since you want a free version for devs & teams, a middle-tier for startups, and an enterprise-grade version, here's how I'd structure LogPro's product tiers.

LogPro Free (Open-Source Plugin for Teams & Developers)

For: Individual developers & small teams

How: A GitHub pre-commit hook & VSCode/JetBrains plugin

Pricing: Free forever

Core Features:

Removes comments, print statements, & logs before committing

Moves logs & debug info to a separate log.txt file

Supports Python (initially), future: Rust, JS, Go

Basic customization (e.g., exclude specific files)

Integrates with GitHub Actions & GitLab CI/CD

Why Offer This for Free?

- Adoption & virality → If engineers love it, companies will pay for advanced features.
- Branding → Developers recommend tools they trust when they move to startups & enterprises.

Where It Lives:

- GitHub (MIT/Apache 2.0 License)
- VSCode/JetBrains Marketplace Plugin
- NPM/PyPI for CLI tool

LogPro Pro (\$10–\$20/month per user | For Startups & Eng Managers)

For: Small startups, engineering managers, tech leads

How: A hosted SaaS dashboard + CLI tool

Pricing: \$10–\$20 per developer/month

Additional Features:

Advanced Filtering: Detect & remove unnecessary TODOs, unused imports, and dead code.

Enforce Team Standards: Customize logging/comment rules per repo/team.

Automated Code Cleanup: Refactor redundant code & formatting before commit.

Integration with GitHub/GitLab CI/CD Pipelines

Code Quality Metrics: Dashboard for tracking tech debt, code churn, and review times.

Slack & Email Alerts for Large Code Changes

Why Startups Will Pay for This?

- Saves hours of manual cleanup per sprint
- Keeps code clean without nagging engineers
- Prevents tech debt accumulation at scale

LogPro Enterprise (\$100–\$500/month per team | Large Companies)

For: Enterprises, CTOs, DevOps teams, compliance-focused engineering orgs

How: Self-hosted & cloud SaaS version

Pricing: \$100–\$500/month per team

Enterprise-Only Features:

AI-Driven Code Review Suggestions (based on PR history & best practices)

Security & Compliance Enforcement (PCI, SOC2, HIPAA, GDPR auto-checks)

Integration with Jira, Confluence, & internal dev platforms

Customizable Pre-Commit Rules & Auto-Fixes

Priority Support & Private Cloud Hosting

Why Enterprises Will Pay?

- Compliance teams need automated code audit tools.
- Cost of bad code at scale is millions—this saves money & time.
- Large orgs already pay for dev tooling—they'll see LogPro as a “must-have.”

Go-to-Market Strategy

Launch LogPro Free → Open-source, VSCode/JetBrains plugin, CLI tool.

Market to Startups → Position Pro as a code quality & tech debt prevention tool.

Sell to Enterprises → Partner with CTOs, DevOps leads & compliance teams.

Summary (TL;DR)

Version	Target Users	Price	Key Features
LogPro Free	Devs & Small Teams	\$0	Removes logs/comments, Git pre-commit, VSCode plugin
LogPro Pro	Startups & Engineering Managers	\$10–\$20/user/month	Automated cleanup, team rules, CI/CD integration
LogPro Enterprise	Large Orgs & CTOs	\$100–\$500/team/month	AI-driven suggestions, compliance, private cloud

Next Steps

- Build MVP of LogPro Free (Pre-commit hook + VSCode extension)
- Set up Pro & Enterprise Pricing Tiers
- Market to startups & dev communities
- Reach out to enterprise CTOs & compliance teams

This is a multi-million dollar SaaS play that starts as a free dev tool but scales into a must-have engineering product.
